DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis B. Tran on June 21, 2007.

The applicant has been amended as follows:

In regard to claim 19, lines 10-17, the information has been deleted and replaced by --a first set of the one or more components; a second set of the one or more components, wherein if the cooling requirement indicates a need for increased cooling of the first set of the one or more components, the control module is to increase airflow to the first set of the one or more components and decrease airflow to the second set of the one or more components, and if the cooling requirement indicates a need for increased cooling of the second set of the one or more components, the control module is to decrease airflow to the first set of the one or more components and increase airflow to the second set of the one or more components.--

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The prior art, Beitelmal et al. (US 2003/0053293), disclose a method and apparatus for individually

cooling components of electronic systems. The prior art, Hokanson et al. (6,167,947), teach a system and method for cooling heat generating devices. The prior art, Chang (6,082,623), discloses a cooling system and method for a portable computer. The prior art, Patel et al. (6,134,108), teach an apparatus and method for air-cooling an electronic assembly. The claim 19 is allowable because the prior art of record, fails to disclose or suggest or teach a controller to increase airflow to the first set of components and decrease airflow to the second set of components if the cooling requirement indicates a need for increased cooling of the first set of components, and decrease airflow to the first set of components and increase airflow to the second set of components if the cooling requirement indicates a need for increased cooling for the second set of components, wherein the first set of components include a processor die having a remote heat exchanger coupled to a heat-generating surface of the processor die.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
